

# Worksite Hybrids – Enabling Export Power for Greater Capabilities

April 2016

# Opportunity – Leverage Commercial Activity for DOD Benefit

- U.S. commercial companies developing worksite hybrid tech – enabling major export power capabilities
- DOD/Utility Sector collaboration will speed innovation and adoption

“The EDI trucks will allow new operational efficiencies for both maintenance with no service interruption, and disaster relief. We can power about 100 homes at the same time off of that vehicle. We’ll have adoption of this one in short order.”

*Dave Meisel,  
Senior Director, Transportation*

# HTUF Worksite Power Working Group

- New working group aimed at advancing worksite power generation & export power capabilities
- Include commercial & military planners & users
- OEMs, suppliers, utilities, TARDEC included

**Desired outcome: Build commercial capabilities & markets to benefit complementary military needs**

# Action Plan

- Recruit Working Group members
- Identify core needs
- Plan & perform technology demonstrators
- Draft specifications & Key Performance Parameters
- Identify business case & path to higher volumes
